AJAY KRISHNAN

+1 (347) 248-1129 ◇ New York ◇ krishajay.g@gmail.com ◇ LinkedIn

EDUCATION

Master of Science, Computer Science: New York University, CGPA: 3.92/4.0 09/2023 - 05/2025
Bachelors in Computer Science & Engineering, Anna University, CGPA : 8.94/10 08/2017 - 05/2021

EXPERIENCE

Unstructured, Devrel Engineer 02/2025 - Present

- Worked on SEO content, growing organic blog traffic **168%**.
- Author technical content across the blog and example notebooks, covering techniques for Document AI.
- Built reusable skills and an Asana-integrated workflow, cutting social post production from ˜30 min to 5–10 and accelerating brainstorming and drafting.
- Owned launch content and messaging (messaging houses, one-sheeters, use cases, lifecycle email) for core product.
- Presented technical webinars and run field marketing at summits, converting a last-minute event into **250+ signups** and ˜400 leads at Databricks Data + AI Summit.
- Produced competitive battlecards and sales enablement (decks, FAQs) adopted by the GTM team.

Visualization, Imaging, and Data Analysis Lab, NYU, Research Assistant 11/2023 - 05/25

- Designed a **novel multi-stage hierarchical classification framework** with LLMs for 19th century immigration documents, achieving **85% accuracy** as the **first ML application** to this historical biodata domain.
- Performed **systematic experiments** on VLM prompting strategies and **image region-based preprocessing** to reduce input noise and improve extraction precision.
- Established **reproducible research methodology and annotation protocols**, scaling data labelling to **25k samples per 3 weeks** by training 3 undergraduate researchers.

Mad Street Den, Machine Learning Engineer 10/2021 - 07/2023

- Built an AWS-based processing pipeline for **financial document compliance analysis and PII Redaction**, integrating model training, deployment, QA, processing **200K+ user records for a major bank**.
- Deployed the org's first GPU-based **real-time inference pipeline** on AWS for large model taxonomies using Redis, Docker, and Kubernetes, achieving **400ms latency across 102 models** and saving $20,000 annually.
- Led **end-to-end ML system architecture** with backend deployed on Spotinst and ML services orchestrated via Kubernetes. Directed QA and SRE teams, driving $1.5M in revenue.

SpaceML (NASA FDL/ SETI Institute), AI Researcher 07/2020 - 07/2023

- Implemented Curator - an ML tool for Earth Science researchers curate datasets from **unlabelled data**.
- Developed a Self-Supervised Learning framework used by **Hubble Space Telescope** to organize unlabelled data and **accelerate data pipelines by 7x** using NVIDIA DALI.
- Created no-code Image Similarity Search tool for non-computer scientists to perform geospatial image retrieval.

SKILLS

Languages & ML Python, LangGraph, Pandas, NumPy, Sklearn, PyTorch, Flask, LLMs
Data & Infra Tools S3, Elasticsearch, Spark
Cloud & DevOps Docker, Kubernetes, AWS, Spotinst

PROJECTS & RESEARCH

GPT at Home Built GPT-2 from scratch and conducted ablation studies on architectural design choices.

Intermediate Features Augmented Contrastive Distillation Using intermediate features for Contrastive Loss to improve representation learning in student-teacher networks. Slides for ICLR '22 CoSubmitting Summer

Curator: Creating Large-Scale Curated Labelled Datasets using Self-Supervised Learning Built a no-code pipeline to curate a dataset of phenomena from **5M** satellite images in **50mins**. AAAI Paper

AWARDS & LEADERSHIP

- Exceptional Contributor Award (NASA)- ML systems enhancing NASA's Earth data pipelines.
- Technical Reviewer - O'Reilly Media - Training Data for Machine Learning, 3D Data Science with Python.
- Head TA, NYU - Cloud Computing (80+ Students) - Led lab sessions and mentored MS students on AWS.
